## Homework 6

Yokoi Connectivity Number

Yokoi

Step1: down sampling (use topmost-left pixel from every 8\*8 array)

Code:

```
///down sampling fetch every 8*8 matrix topmost-left pixel
for (int i = 0; i < x; i+=8) {
    for (int j = 0; j < y; j+=8) {
        down[down_row][down_col] = img.at<uchar>(i, j);
        down_col += 1;
    }
    down_col = 1;
    down_row += 1;
}
```

Result: get a 64\*64 array

Step2: binarize the 64\*64 array

Code:

```
///build 0/1 array
for (int i = 1; i < 65; i++) {
    for (int j = 1; j < 65; j++) {
        if (down[i][j] >= 128) down[i][j] = 1;
        else down[i][j] = 0;
    }
}
```

Result: get a 0/1 array

Step3: compute Yokoi connectivity number

Code:

build f & h function from ppt then iterate

```

char h( int x0 ,int x1 , int x2 , int x3){
    if(x0 == x1){
        if(x0 == x2 && x0 == x3) return 'r';
        else return 'q';
    }
    return 's';
}

int f( char b ,char c ,char d ,char e ){
    if(b == 'r' && c == 'r' && d == 'r' && e == 'r') return 5;
    int cnt = 0;
    if(b == 'q') cnt++;
    if(c == 'q') cnt++;
    if(d == 'q') cnt++;
    if(e == 'q') cnt++;

    return cnt;
}

```

```

//yokoi
char b,c,d,e;
for(int i=1 ; i < 65 ; i++){
    for(int j = 1 ; j < 65 ; j++){
        if( down[i][j] == 1 ){
            b = h( down[i][j] , down[i][j+1] , down[i-1][j+1] , down[i-1][j] );
            c = h( down[i][j] , down[i-1][j] , down[i-1][j-1] , down[i][j-1] );
            d = h( down[i][j] , down[i][j-1] , down[i+1][j-1] , down[i+1][j] );
            e = h( down[i][j] , down[i+1][j] , down[i+1][j+1] , down[i][j+1] );
            ans[i-1][j-1] = f( b , c , d , e );
        }
    }
}
}

```

Result: get an array that store the answer I compute

Step4: output as txt file

Code:

```

//output a txt file
ofstream newFile;
newFile.open("hw6.txt");

for(int i = 0 ; i < 64 ; i++){
    for(int j = 0 ; j < 64 ; j++){
        if(ans[i][j] == 0) newFile << ' ';
        else newFile << ans[i][j];
        if (j % 63 == 0 && j != 0) newFile << '\n';
    }
}

```

Result:
